A STANDARDISED MEDICAL SOLUTION IN A BOX

The 2017 Interagency Emergency Health Kit (IEHK) is a standardised kit of essential medicines, supplies and equipment deployed by UN agencies and other partners who respond to large-scale emergencies.

This prepacked kit is designed for use when there is a disruption of medical supplies in an emergency situation. It efficiently fills the gap until the medical supply mechanisms are restored. One kit is designed to meet the basic health needs of 10,000 people for approximately three months. With its modular set-up, an IEHK can be ordered as a complete set, or as a basic unit with one or more supplementary units.

FAST & EFFICIENT

We know that delays can cost lives, so our logistics solutions are designed for speed and efficiency. If needed, we will provide transport services as well. We have a dedicated logistics team that arranges immediate shipment during emergencies. Our ability to offer extremely competitive freight costs, together with economical packing and solid export cartons, ensures a safe, swift and seamless delivery to the disaster affected area.

ONE-STOP-SHOP

Imres keeps a minimum of 50 complete IEHKs in stock at all times. These can be shipped instantly. The kits are assembled and stored in our GDP-certified warehouse in the Netherlands, where we monitor the expiration dates to ensure a minimum of 12 months' remaining shelf life upon shipment.

While more than 35 years of experience has enabled us to identify the best and most reliable suppliers for each of our products, Imres strives to continuously improve, expand and innovate. We constantly source new products and suppliers. This ensures that we keep our range up to date, and that we consistently provide our customers with the best prices, products and quality.

QUALITY

You want to be sure that the products for your health programme are high of quality. We do not take any chances when it comes to the quality of the kits and products that we supply. Imres has implemented an uncompromising set of quality controls, including a dedicated quality control department and independent testing in World Health Organisation (WHO) pre-qualified and ISO/IEC 17025:2005 certified laboratories for pharmaceutical products. Our stringent vendor rating system sees Imres visiting and screening vendors around the world. Manufacturers must achieve our high, internationally recognised standards, and those of our customers, and must adhere to the necessary quality control processes to qualify as an Imres vendor. All our products are screened, to ensure the quality of every item that we supply.

IEHK COMPOSITION

The IEHK 2017 consists of two different sets of medicines and medical devices: a Basic Unit and a Supplementary Unit. Each IEHK is designed to serve 10,000 people for three months.

All units are packed in extra sturdy boxes to ensure its contents are secure. Each box has a maximum weight of 25 kg and is equipped with convenient carrying handles on the sides.

We hold sufficient stock of IEHK's to respond quickly to any crisis or emergency situation.

BASIC UNIT MODULES

The Basic Unit contains essential medicines and medical devices, and can be used by primary healthcare workers with limited training. It contains oral and topical medicines, and no injectables. To facilitate distribution to smaller health facilities on site, the quantities of pharmaceuticals and medical devices in the basic unit have been divided into 10 identical units, each for 1,000 people.

SUPPLEMENTARY UNIT MODULES

The Supplementary Unit contains additional essential medicines and medical devices, and is to be used only by professional health workers or physicians. There are eight modules in the supplementary unit. One with equipment, one with renewables, one with documentation and five with medicines. Some of the modules are optional since they may not be needed in all cases.

OPTIONAL MODULES

Anti-malaria modules are available for both the Basic Unit and the Supplementary Unit. The anti-malaria module for the Basic Unit consists of a combination therapy for the treatment of uncomplicated falciparum malaria, as well as malaria rapid tests. The anti-malaria module for the Supplementary Unit consists of second line treatment injectable drugs.

The Supplementary Unit also has an optional post-exposure prophylaxis (PEP) module. It contains medicines and diagnostics for first line treatment after potential exposure to HIV infection.

The other optional modules are the cold chain medicines, the controlled medicines and the documentation module. The optional modules will only be included on specific request.

THE IMRES DIFFERENCE

Over more than **40 years**, Imres has proved that we are a **reliable, efficient and trusted partner** in **healthcare strengthening programmes** in developing countries.

As an organisation, we are big enough to **make a difference**, but small enough to give our customers personal attention, and to care about the difference that we are making in lives and communities, and in our partners' health projects.

We have **offices and facilities** in the **Netherlands, Dubai, India and China**.

Our **production areas** include a GMP room for secondary packing and a **Class D clean room** for primary packaging, as well as a **1000 m² kit production area**. As a supplier, we do not make promises that we cannot keep. If we commit to a project and specific deliverables, it is because we really can deliver, as promised.

Like the projects that we are **proud** to be part of, Imres has heart. We are good at what we do, but we also feel good about what we do. We feel responsible for our partners' projects until each one ends **successfully**.

Then we move onto our **next challenge**; our next opportunity to turn humanitarian dreams into **concrete solutions** and **decisive action** that saves lives.
